

Calibrated Design Sheet

Boundary Line

Name:	NEW XL CDS
Date:	TESTING.
Design Title:	

Design Instructions Checklist

Refer to the Design Instructions steps at:
www.armorcore.com.au/design-instructions

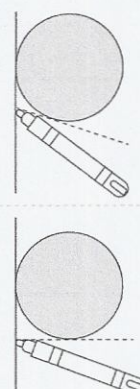

- ☐ Flatten out your ArmourCore Calibrated Design Sheet on a flat surface. (*Step 1*)
- ☐ Within the Boundary Lines, draw an Insert Perimeter to match the exact outer dimensions of your requirement. (*Step 2*)
- ☐ Place the items you want to store in your Custom Tech Insert within your insert Perimeter, exactly how you want them. (*Step 3*)

Note: You must leave at least 15mm between each item, and 15mm between each item and the outer-edge of each Perimeter, to allow space for manufacturing.

- ☐ Using your smart phone or other device to take a Reference photo. (Step 4)
- ☐ Trace around your items with a pencil to create your item Outlines. (Step 5)
(Note: See Design Instructions Step 5 for critical information)

for critical information)

Be careful not to draw the Outline underneath items with curved surfaces (e.g., Cylinders). If you do, your item cut-out will be too small, and your item won't fit.

Remove your items from the Design Sheet, then make any modifications to your Outlines until you are happy with the Outlines.

- ❑ If your parcel **isn't** as big and different than the Design Grid, there's use a five-piped black felt pen to trace over the parcel lines you have drawn. (*Step 6*)
 - ❑ In the center of each Outline, write the depth you want each Outline's cut-out to be. (*Note:* Must be in **mm** increments.) (*Step 7*)
 - ❑ **Ensure the Design Sheet is A74 and there are no ridges in the paper.** (Use weights or tapes if needed). Then take photos of your template, **ensuring the back and center are visible in the photo** and **submit the back photo - to use when ordering.** (*Step 8*)
- Place your order at www.aindoo.com.au. (*Step 09*)
- 

☐ Place your order at www.armourcore.com.au. (Step 09)
